

Table S1. Mean ($\bar{\theta}$) and mean CV ($\overline{CV_{\theta}}$) of Jaccard and Sørensen similarity indices for comparing species composition between a single plot and a cluster plot of a cluster layout for Fushan and Pasoh controlling for PAREA (250, 500, 1000 m²) and CEXTENT (1000, 2500, 10000 m²). The three comparisons are: (1) single vs CLAYOUT = rectangle, (2) single vs CLAYOUT = square, (3) single vs CLAYOUT = triangle. There are 27 types of combinations for a study site. The empirical 95% confidence intervals are given in parentheses

No.	Controlled Design Factor		Comparison	Mean ($\bar{\theta}$)		Mean CV ($\overline{CV_{\theta}}$)	
	PAREA	CEXTENT		Single vs CLAYOUT	Jaccard	Sørensen	Jaccard
